QUICKBIRD

G. Pennucci, R. Grasso, C. Trees

Bathymetry estimation from high-resolution satellite images.

NURC-NATO Undersea Research Centre, Viale San Bartolomeo 400, 19138 La Spezia

1. LONG TERMS GOALS

2. THE SENSORS

3. THE SENSORS

4. CONCEPTS UNDERLYING THE REMOTE SENSING OF BATHYMETRY, BASIC PRINCIPLE

5. THE LINEAR TRANSFORMATION SOLUTION

6. RESULTS

7. CONCLUSION and FUTURE ANALYSIS

References

The authors thank Italian Navy (Galatea and Aretusa vessels) and the Italian Coast Guard for support during the BP07 experiment, and the Italian Hydrographic Institute for having provided the processed bathymetry data for this work.
